Office Action Summary

DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
2.
 - I. Claims 1-5, 7-13 drawn to a system to test an emergency shut off valve that is fluidly actuated, classified in class 73, subclass 168.
 - II. Claim 6, drawn to a system to test an emergency shut off valve using a limit switch, classified in class 73, subclass 168.
3. The inventions are distinct, each from the other because of the following reasons:

Groups I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because all of the limitations of II are not in I. The subcombination has separate utility such as a system to test an emergency shut off valve that is actuatable via an electric motor
4. Because these inventions are distinct for the reasons given above and the search required for each of the groups is different (pneumatic versus electrically driven type valves), restriction for examination purposes as indicated is proper.
